

Help us design Bissell 307

A group of students at the Faculty of Information are working to transform Rm 307 into a studio workspace (like a makerspace, but please don't let that term constrain your ideas). We need your help getting started:

1. Take a few minutes to think about what you could do in a space like this and how you could use
2. Draw and write your ideas here. You can include tools, people, equipment, communities, concepts, a cup of tea....
3. Hand your sheet back to me, OR drop it in mailbox A20 (Dan S.), OR email it to jess.whyte@gmail.com, OR bring it to our first design session (May 30, 3-6pm in Rm 307).

Your turn: _____

I like making wearables + messing around w/ small sensor projects. I'd love just a stack of arduino "kits" available to play around with (maybe available to "buy" if making a project).

Also, I'd love for this space to feel comfortable + cozy, not too put together. It should be a mix of projects + people.

Finally, a regular speaker series where creators/scholars come + give talks or demos would be very cool.

- Yes, you can share my contribution with others.
- No, please don't share my contribution.
